COSTS AND CHARGES IN RELATION TO INVESTMENT SERVICE AND INVESTMENT INSTRUMENTS

Applicable from June 25, 2020

Please find below the costs and charges associated with investment service and investment instruments sorted by the individual product groups.

The costs and charges listed below are valid, unless otherwise stated in the relevant table, when the deal is being closed, modified, restructured or early terminated. The term "indicative", used in the tables below, means that the specific value of a given charge or cost to the customer might be lower than the stated value, due to individual pricing.

In ČSOB, investment instruments are classified as investment instruments for investment purposes and investment purposes costs and charges are also displayed in the relevant termsheet, where inducments are also provided if they are applied to the relevant investment instrument. Investment purposes include also funds that are not included in the tables below (costs and charges are shown in the relevant document "Key information about costs and charges").

The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determineg the position value).

The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).

	spread in % of the nominal		in % of the	% quantile of client spread 90% in CZ of CZ								in % of the nominal amount	TOTAL on a sample transaction of CZK 1000000

* calculated for a sample transaction at maturity of one yea, in the case of transactions longer than 1 year, this figure applies for each year.

The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determing the position value).

The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).

* calculated for a sample transaction at maturity of one year, held to maturity

** only in case of selling before maturity; if held to maturity no exit fee is applied

Taxation of investment instruments (including withholding tax) is governed by the Income Tax Act No. 586/1992 Coll., as amended, and is not included in the table above nor in the sample examples below.

If the customer performs currency conversions on their ČSOB transaction accounts, the above costs are increased by the costs of these currency conversions.

The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determineg the position value).

The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).
