The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determing the position value). The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).

	spread in % of the nominal		in % of th	% of the nominal amount* in C of C		90% quantile of client spread in CZK on a sample transaction of CZK 1000000*						in % of the nominal amount	TOTAL on a sample transaction of CZK 1000000

* calculated for a sample transaction at maturity of one year, held to maturity

** only in case of selling before maturity; if held to maturity no exit fee is applied

*** for the customer's securities under the Investment Services Agreement are not possible to purchase the custody service separately

Taxation of investment instruments (including withholding tax) is governed by the Income Tax Act No. 586/1992 Coll., as amended, and is not included in the table above nor in the sample examples below.

If the customer performs currency conversions on their ČSOB transaction accounts, the above costs are increased by the costs of these currency conversions.

The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determine the position value).

The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).
