

COSTS AND CHARGES IN RELATION TO INVESTMENT SERVICE AND INVESTMENT INSTRUMENTS

Public

Applicable from March 12, 2025

Please find below the costs and charges associated with investment service and investment instruments sorted by the individual product groups. In CSOB, investment instruments are classified as investment instruments for hedging purposes and investment instruments for investment purposes. The costs and charges listed below are valid, unless otherwise stated in the relevant table, when the deal is being closed, modified, restructured or early terminated. The term "indicative", used in the tables below, means that the specific value of a given charge or cost to the customer might be lower than the stated value, due to individual pricing. Costs and charges are also displayed in the relevant termsheet. In the case of investment instruments for investment purposes inducements are also provided in the termsheet, if they are applied to the relevant investment instrument. Investment instruments for investment purposes include also funds that are not included in the tables below (costs and charges are shown in the relevant document "Key information for investors and information about costs and charges").

The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determining the position value).

The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).

Product groups of investment instruments for hedging purposes Interest rate products	Indicative amount of client spread in % *	Indicative amount of client spread on a sample transaction of CZK 1000000*	90% quantile of client spread in % *				90% quantile of client spread in CZK on a sample transaction of CZK 1000000*				Other costs and charges in% of the nominal amount	Other costs and charges of a sample transaction of CZK 1000000	TOTAL in % of the nominal amount	TOTAL on a sample transaction of CZK 1000000

* calculated for a sample transaction at maturity of one year, in the case of transactions longer than 1 year, this figure applies for each year. The relative value is based on the proportion of the amount of the client spread to the BPV of the given transaction, where BPV stands for "basis point value".

The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determining the position value).

The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).

* in the event that a yield is to be paid out, instead of a one-time entry fee, a deferred entry fee may be applied, the amount of which is specified in the relevant termsheet (product sheet). The deferred entry fee is calculated for each year of the investment, see example below.

** only in case of selling before maturity, if held to maturity no exit fee is applied

*** for the customer's securities under the Investment Services Agreement are not possible to purchase the custody service separately

**** calculated for a sample transaction at maturity of one year, held to maturity

Taxation of investment instruments (including withholding tax) is governed by the Income Tax Act No. 586/1992 Coll., as amended, and is not included in the table above nor in the sample examples below.

If the customer performs currency conversions on their CSOB transaction accounts, the above costs are increased by the costs of these currency conversions.

The client spread represents the difference between the customer position price (actually realized) and the bank position price (whether actually realized or theoretical, determined by direct market data observation or appropriate methodology for determining the position value).

The client spread is included in the trade price so there is no additional costs or charges for the customer.

The 90% quantile of the client spread means that 90% of transactions traded with the given product in the last calendar year were with the client spread lower than or equal to this value.

If N/A is given for the 90% quantile of a specific maturity / product, this means that we do not have sufficient statistical data needed to calculate this quantile characteristic (insufficient number of trades at a given maturity).

year of buyback	0	0	1%	10000 CZK	2%	20000 CZK	0	0	0	3%	30000 CZK	
									Sum ²	7,25%	72500 CZK	

¹ The Client holds the investment instrument to maturity² The Client sells the investment instrument before maturityNote: in case of other bonds, the sum¹ represents the maximum amount in case where a client sells the investment instrument in the last year of maturity, and the fees of custody service are added up for all 5 years. In the case of earlier sale, the sum shall be accordingly lower as custody service fees will only be charged for the actual number of years applicable.
